## ● How it all started

2017: AFIKLM E&M & NLR decided to work together in determining if AR is a gimmick or game changer

Approach: Co-create a pilot project on the B777 type training – air-conditioning pack to investigate three things:

- Is the AR technology mature enough
- Does this allow us to reduce training duration
- Is the training quality improved

# What we learned

But along the way more benefits appeared

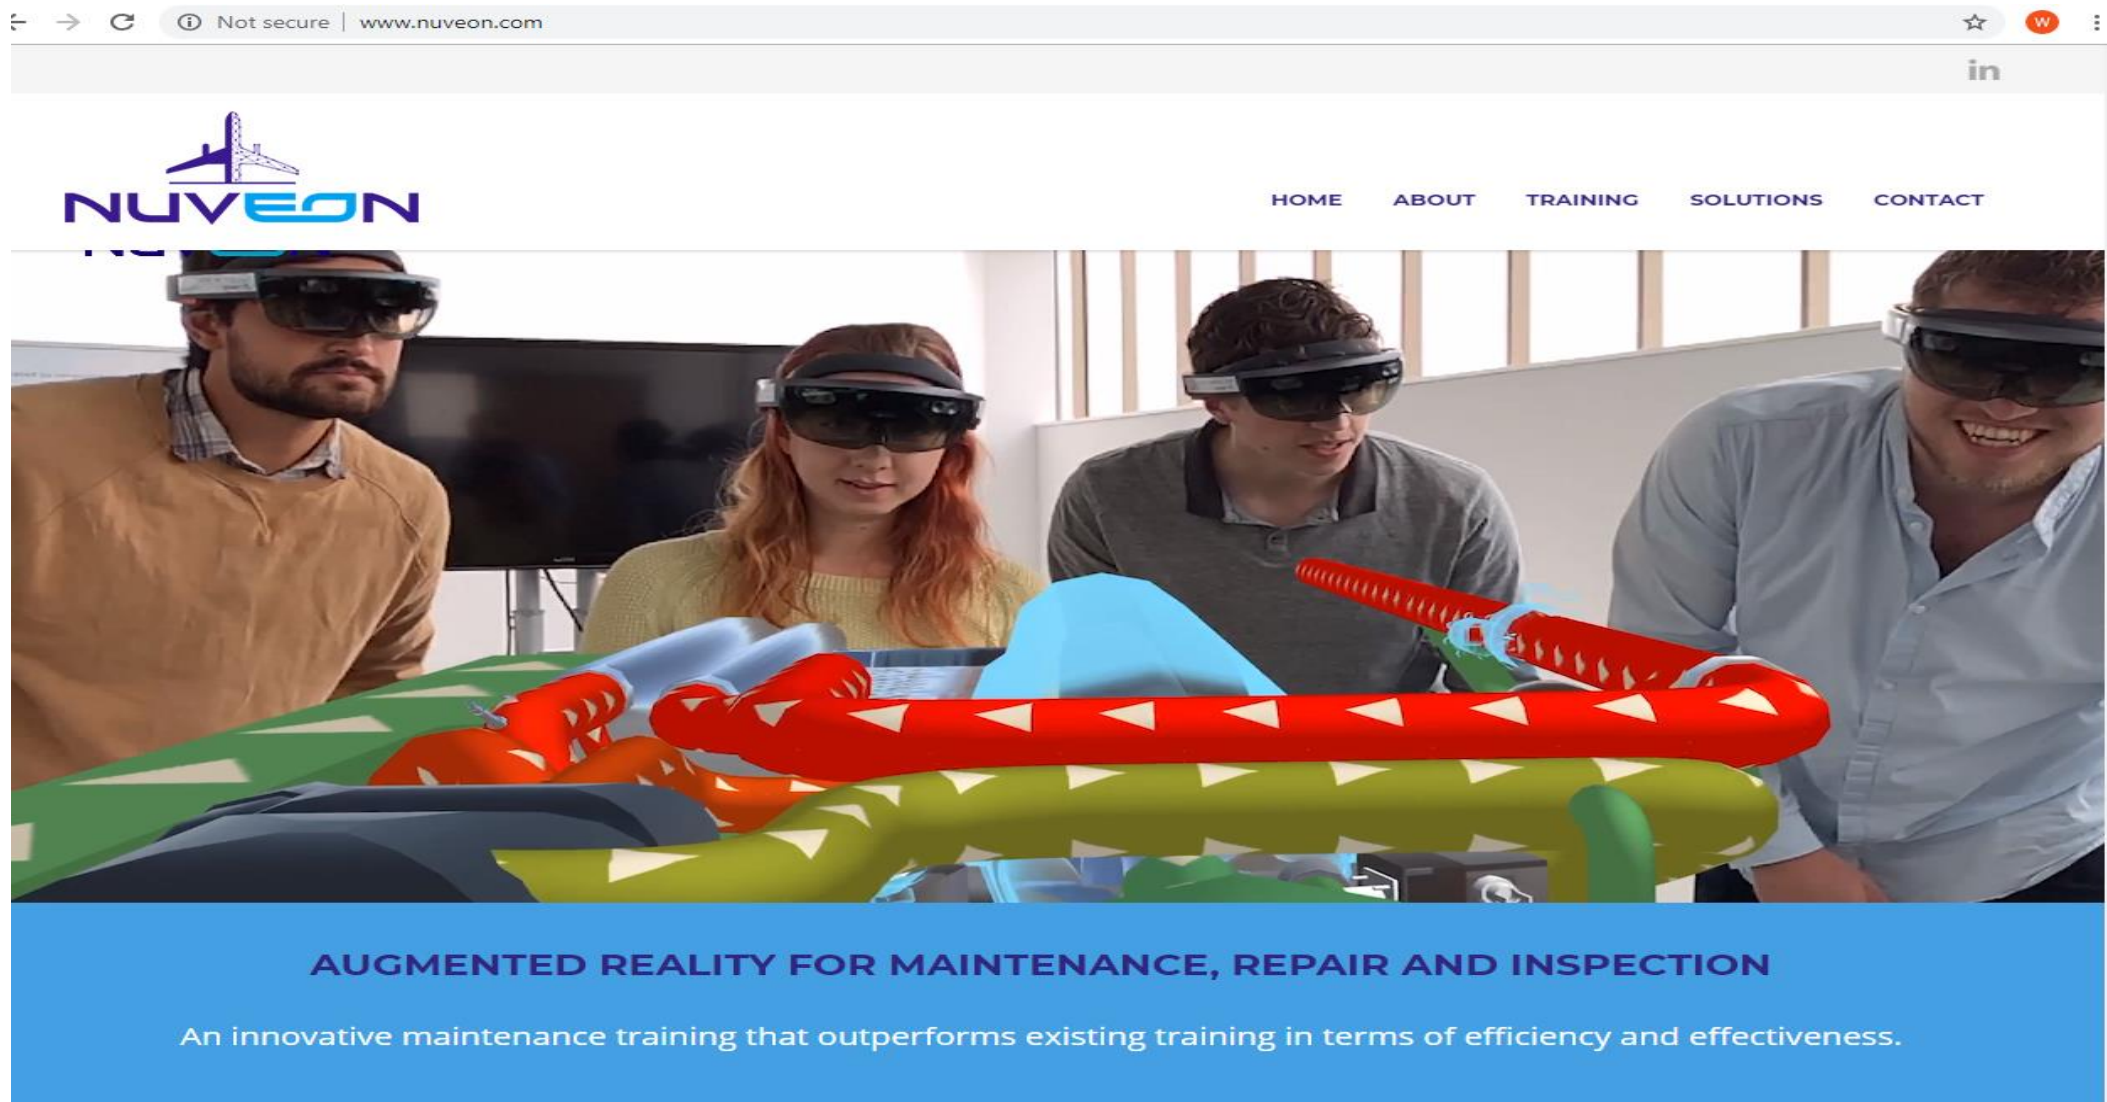

- Mix of theory and practice
- Reduction of type training and costs
- More motivational for students and better understanding of the course content
- Ability to perform tasks/ scenario's you would not do on an operational aircraft

# What's next!

The introduction in MRO, the first business case is under construction

*Vision of NLR and AFIKLM E&M : AR is going to be a game changer in MRO*

# ● NUVEON is launched

Q&A and demonstration after the round table
