ROTTERDAM THE HAGUE  
INNOVATION AIRPORT

6 February 2025

# RHIA: INNOVATION FOR AEROSPACE IN A BROAD PERSPECTIVE

## STIMULATE AEROSPACE INNOVATIONS

In our innovation ecosystem we work to create a basis and growth model for innovation

## INCREASE SOCIAL-ECONOMIC VALUE

The airport is a magnet for new economic activities, providing opportunities in jobs and innovation

## ACCELERATE ENERGY TRANSITION

Less emissions, alternative fuels and to be an airport that delivers energy to the net

RHIA is a community platform of companies, research institutions and governments. Together we are committed to the transition to a cleaner, quieter and smarter future of aviation. Together, we make innovation fly.

# AIRPORT AS A DRIVER OF AN INNOVATION CLUSTER

## AEROSPACE CLUSTERS

1. **NOORDWIJK\***: SPACE CAMPUS, ESA BIC, ESTEC
2. **VALKENBURG**: UNMANNED VALLEY
3. **DEN HAAG**: TECHNOLOGY PARK YPENBURG
4. **DELFT**: AEROSPACE INNOVATION HUB @TUD, SAM XL
5. **AVIATION DISTRICT RHIA**: RTHA, RTHA CAMPUS, FIELDLAB NEXT AVIATION, AIRPORT TECHNOLOGY LAB
6. **PAPENDRECHT**: FOKKER

## SEAPORT CLUSTER

## GREENPORT CLUSTER

# RHIA organisation and COMMUNITY

## PROJECT PORTFOLIO:

# RHIA organisation and COMMUNITY

Community:

- From start-up to corporate
- Education/Research organisations, all levels
- Government bodies

Knowledge sharing through RHIA Cafes and Talks

Exchange with other networks such as NAG

RHIA Partnership model in progress; due this quarter

Interest in the RHIA-program?

Please join the Community!

# PROGRAMS

## DUTCH2 AVIATION HUB

Dutch2 Aviation Hub is een ecosysteem dat gebruikmaakt van een operationele test- en ontwikkelomgeving (RT-HA) om alle aspecten van waterstofvliegen mogelijk te maken verder te ontwikkelen.

5

## AIRPORT TECHNOLOGY LAB

Ontwikkel, test- en demonstratieomgeving voor innovatieve producten en diensten voor luchthavens.

## FIELDLAB NEXT AVIATION

Ontwikkelen en testen van o.a. aandrijvings-technieken, vleugelontwerpen, propellers en rotorbladen, voor duurzaam vliegen.

5

## SMART ENERGY AIRPORT

Het onderzoeken van een optimale duurzame energievoorziening op RT-HA voor logistieke (grond)processen en de ontwikkeling van elektrisch vliegen, met het voorterrein als systeemintegratie.

5

# PROGRAMMS

## DUTCH<sub>2</sub> AVIATION HUB

Dutch<sub>2</sub> Aviation Hub is een ecosysteem dat gebruikmaakt van een operationele test- en ontwikkelomgeving (RT-HA) om alle aspecten van waterstofvliegen mogelijk te maken verder te ontwikkelen.

5

## AIRPORT TECHNOLOGY LAB

Ontwikkel, test- en demonstratieomgeving voor innovatieve producten en diensten voor luchthavens.

## FIELDLAB NEXT AVIATION

Ontwikkelen en testen van o.a. aandrijvings-technieken, vleugelontwerpen, propellers en rotorbladen, voor duurzaam vliegen.

## SMART ENERGY AIRPORT

Het onderzoeken van een optimale duurzame energievoorziening op RT-HA voor logistieke (grond)processen en de ontwikkeling van elektrisch vliegen, met het voorterrein als systeemintegratie.

## **FIELDLAB NEXT AVIATION**

Development and testing of propulsion technologies, wing designs, propellers and rotor blades, for sustainable flying.

# Fieldlab Next Aviation

- RHIA program, led by TU Delft and NLR
- Purpose: Development of a test- and demonstration environment for new technologies and innovations at the airport (on airside)
- Using our Flight Test organisation as a strong basis

## Location Flight Test Organisation TU Delft & NLR

# Activities of our Test Flight Organisation

## 3 Test/research aircrafts

### Unique capabilities

- Experts in Flight Test Operations
- Multiple test flight pilots
- Modification Design, Certification, Airworthiness

### Home of multiple “flying test beds”

- Flying Classroom for Education (TUD)
- Advanced aviation research, inflight measurements
- Validation & demonstration purposes of new technologies and procedures, including electric and hydrogen flying

# Focus areas

Support to other (RHIA) projects & demos on airside

Electric Powered Aviation

Quieter flights

**TUD/NLR Flight Test organisation in RTHA Hangar 3**

# Some (recent) highlights

---

- Linked to Municipality Rotterdam “Sustainability Transition” funding, e.g:
  - Refuelling and Taxi-demo AeroDelft on gaseous hydrogen
  - Study on hydrogen leakage sensors
- Electric powered aviation: RHIA talk Nov’24: develop Fieldlab relevance and community
- Under development: “Steep Approach” for noise reduction
- [TU Delft welcomed a new flying testbed](#) (Cessna F337F Skymaster) on 21 January.

# PROGRAMS

## DUTCH2 AVIATION HUB

Dutch2 Aviation Hub is een ecosysteem dat gebruikmaakt van een operationele test- en ontwikkelomgeving (RT-HA) om alle aspecten van waterstofvliegen mogelijk te maken verder te ontwikkelen.

5

## AIRPORT TECHNOLOGY LAB

Ontwikkel, test- en demonstratieomgeving voor innovatieve producten en diensten voor luchthavens.

## FIELDLAB NEXT AVIATION

Ontwikkelen en testen van o.a. aandrijvings-technieken, vleugelontwerpen, propellers en rotorbladen, voor duurzaam vliegen.

5

## SMART ENERGY AIRPORT

Het onderzoeken van een optimale duurzame energievoorziening op RT-HA voor logistieke (grond)processen en de ontwikkeling van elektrisch vliegen, met het voorterrein als systeemintegratie.

# SMART ENERGY AIRPORT

**Investigate and plan** the electrification infrastructure necessary for supporting electric aircraft operations at Rotterdam The Hague Airport (RTHA)

# SEA project status

## GOAL

- **Roadmap to 2035**

Address increasing electricity demand ensuring the airport's energy needs are met sustainably over the next decade

- **Strategic Development of an Energy System**

Recommendations on implementing sustainable energy solutions and infrastructure to support airport operations, ensuring alignment with environmental goals

- **Incorporation of a Real-Time Smart Energy Management System**

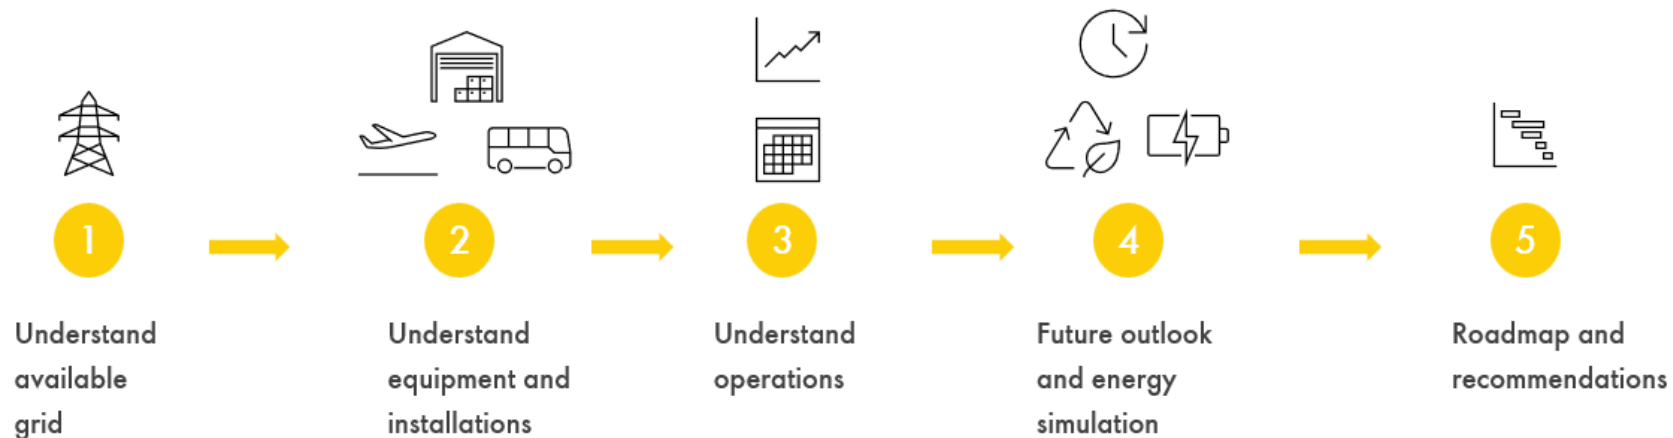

optimize energy usage and ensure efficient distribution, while providing an operational revenue model to support financial sustainability.

## PARTNERS

# SEA project steps

The primary objective of this project is to facilitate a seamless transition to sustainable energy solutions at Rotterdam The Hague Airport (RTHA).

Key steps include:

1. **Infrastructure Evaluation:** Conduct a thorough assessment of the current energy infrastructure to identify gaps and establish a baseline for improvements.
2. **Energy Requirements Analysis:** Determine the specific energy needs to support electric aircraft operations through detailed projections and analyses.
3. **Infrastructure Upgrade Plan:** Develop a comprehensive plan outlining the necessary steps and investments to enhance the airport's energy systems, ensuring they can support new technologies and increased energy loads.
4. **Regulatory Compliance:** Ensure all developments comply with sustainability and environmental regulations, contributing positively to the airport's environmental goals and paving the way for a greener future.

# SEA ROADMAP

## Electrical Capacity and Future Demands at RTHA

2025 - 2027

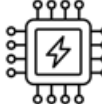

2028 - 2033

2034 - 2035

### Current situation

-  32 smaller connections (<50kW)
-  8 larger connections (50kW - 500kW)
-  Sufficient grid & contracted capacity

### Upgrade infrastructure & Renewable Energy integration

-  Setup energy groups and create a GTO (Groep Transport Overeenkomst)
-  Install Realtime Energy Management System
-  Renewables generation, integration & energy storage (BESS) to ensure stable energy supply
-  **Pilot projects** (BESS, Smart EMS, "Power up" group 4 500 kWh -> 1 MWh)

### Expansion & Optimization

-  Expand renewable energy installations and storage capacity
-  MW-charging implementation Group 2&3
-  Grid and Energy storage combination. Ramp up from 500kW - 4MW
-  Optimize energy management system

### Implementation & prepare for growth

-  Roll-out infrastructure upgrades and renewable energy projects
-  Ramp up grid & renewables 4MW+
-  Continuous improvements, documentation. Updating roadmap and prepare for third fase of electric aviation.

# PROGRAMS

## DUTCH2 AVIATION HUB

Dutch2 Aviation Hub is een ecosysteem dat gebruikmaakt van een operationele test- en ontwikkelomgeving (RT-HA) om alle aspecten van waterstofvliegen mogelijk te maken verder te ontwikkelen.

5

## AIRPORT TECHNOLOGY LAB

Ontwikkel, test- en demonstratieomgeving voor innovatieve producten en diensten voor luchthavens.

## FIELDLAB NEXT AVIATION

Ontwikkelen en testen van o.a. aandrijvings-technieken, vleugelontwerpen, propellers en rotorbladen, voor duurzaam vliegen.

## SMART ENERGY AIRPORT

Het onderzoeken van een optimale duurzame energievoorziening op RT-HA voor logistieke (grond)processen en de ontwikkeling van elektrisch vliegen, met het voortrems als systeemintegratie.

## **AIRPORT TECHNOLOGY LAB**

Development, testing and demonstration environment for innovative products and services for airports.

# Airport Technology Lab (ATL)

## Description project

- Development and demonstration environment for digital driven innovation, products, and services for airports
- Funded by EFRO (KvWII) from 2020-2024
- Involved >10 partners

### ATL Partners (EFRO-project)

### Funded by

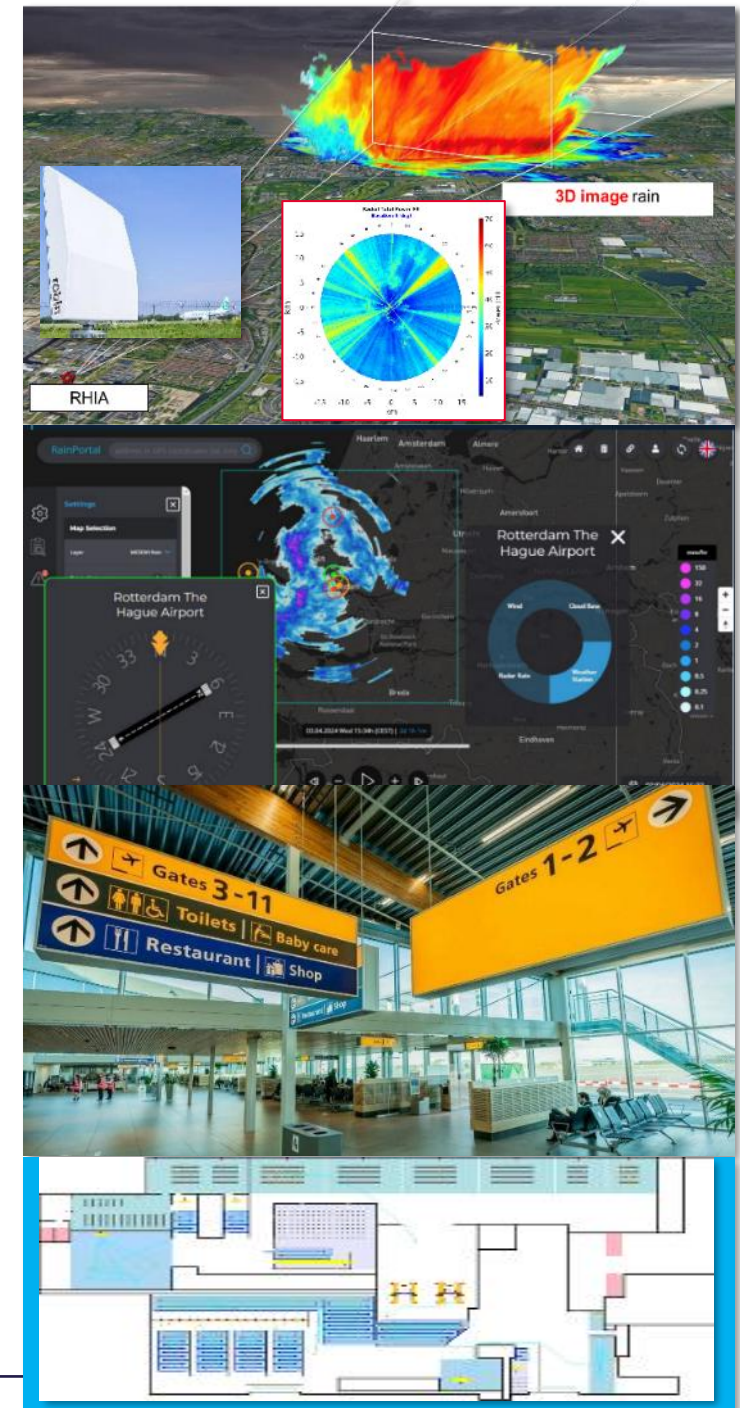

# Results

- **Fieldlab infrastructure:** AODB to share data with partners and link new tools
- Innovation projects:
  - Weather now-casting (radar technology)
  - Delay prediction + Flight-to-gate planning
  - Passenger flow management in terminals
- Education: involved >130 students; recurring collaboration with 5 ATL partners

## Next steps

- Open for new project ideas

# To summarize...

RHIA:

- Is a community platform working on the transition to a cleaner, quieter and smarter future of aviation
- Focusses on various innovation programs, such as DutchH2 aviation hub, Smart Energy Airport & Fieldlab Next Aviation
- Organises various knowledge sharing events for the community → **Sign up for our next RHIA Talk on Feb 13!**

Interest in the RHIA-program?

Please join the Community!

**Register before Feb 8!**

**RHIA TALK**  
**'The Innovation Route'**  
Hosted by RHIA partner Transavia  
February 13 | 15:15 - 18.30

The poster features a collage of images related to aviation: a Transavia aircraft engine, a view of airplane seats, a Transavia aircraft on the tarmac, and a Transavia aircraft in flight. The text is overlaid on the collage.
